Teacher Language Codebook

General information

Question/Area of Information	Response options	Notes
Study ID		Use study number found in Covidence
Title		
Authors		Use APA format with last names- Last name & Last name or Last name et al.
Publication Year		
Type of publication	1 Published study 2 Dissertation 3 Unpublished study 0 Other	
Aims or Research Question(s)		Write out complete questions and include all of the aims or RQs associated with the empirical study. For dissertations, this would mean including RQs from some chapters but not the chapter(s) which include literature reviews or meta-analyses.

Characteristics of included studies

Question/Area of Information	Response options	Notes
Study design	1 Randomized controlled trial 2 Quasi- experimental study 3 Correlational 4 Descriptive 5 Single Case Design- reversal (ABAB)	

	6 Single Case Design- multiple baseline (MBL) 7 Singe Case Design- Other 8 Qualitative 9 Ethnographic 0 Other	
Study Setting		
Country in which the study was conducted	1 United States 2 UK 3 Canada 4 Australia 5 Spain 6 Guatemala 7 China 0 Other	
Geographical Context	1 Urban 2 Urban (low-income/SES) 3 Rural 4 Suburban 5 Not reported (N/R)	
Type of instructional setting	1 General education classroom 2 Inclusion classroom 3 Self-contained special education classroom 4 Resource room 5 Alternative special education setting (special education school, language unit, etc) 0 Other	This should be chosen based on how the author classifies or describes the setting. The presence of students with high-incidence disabilities does not mean that it is an inclusion classroom. Inclusion classrooms have different definitions based on the year and location, so a classroom should only be inclusion if labeled as such by the author. A study can have more than one setting

Teacher Language Sample- Student Participant Info
The teacher language sample is the portion of the full study sample that met all inclusion criteria for this review. This could be the full study sample or it could be just one group or teacher of the study sample who met inclusion criteria. For example, if the study had 3 classrooms of 20 students (full study sample of 60 students) but only 2 classes of students met inclusion criteria, all of the following questions would be answered about those 2 classes of students.

Student Demographics-

Question/Area of Information	Response options	Notes

Demographics reported for students:	1 District 2 School 3 Classrooms/instructional groups (teacher language sample) 4 Target students 5 Not reported 0 Other	Specify which level(s) the study reports on for student demographic information, including student age, sex, race/ethnicity and SES.
Demographics reported for the Teacher language sample:	1 Sex 2 Race/Ethnicity 3 SES 4 Age (in years, not grade) 9 not reported (N/R)	
Total number of students in teacher language sample		
Number of students with high-incidence disabilities in teacher language sample		
Average group size for instruction within teacher language sample		Calculate this average if not reported
Were there additional students in the study sample outside of those in the teacher language sample?	1 Yes 2 No	If the number of students in the study sample is greater than the number of students in the teacher language sample, then reply yes.
High Incidence Disabilities of teacher language sample students	1 Learning Disability/Specific Learning Disability 2 Reading Disability/Dyslexia 3 Math Disability/Dyscalculia 4 Intellectual Developmental Disability / Cognitive Impairment 5 Developmental Language Disorder/Specific Language Impairment/Language Delay 6 Emotional-Behavioral Disorder 7 Autism Spectrum Disorder 0 Other	Select all that are present based on study inclusion criteria, research questions, participant descriptions, or student demographics Only select “Other” if there is another high incidence disability not listed.
Disability Identification	1 Not formally identified- "struggling" or "at-risk" for high-incidence disabilities 2 Formally identified- IEP/diagnosis	1-These are students who are nominated by their teachers as struggling and then assessed to confirm lower performance, students who have scored in a researcher defined lower range of a screener, or students who are getting additional support (Tier II or III) but have not qualified yet for an IEP.

		2- Students who have an IEP and receive special education services and/or are identified as having a disability
Grade of students in teacher language sample	1 Elementary (K-5) 2 Middle (6-8) 3 High (9-12)	
Primary disability of study	1.Learning Disability/Specific Learning Disability 2.Reading Disability/Dyslexia 3.Math Disability/Dyscalculia 4. Intellectual Developmental Disability 5.Developmental Language Disorder/Specific Language Impairment/Language Delay 6. Emotional-Behavioral Disorder 7. Autism Spectrum Disorder 8. ADHD 9. No primary	Select the primary disability based on the target sample explicitly stated in research questions or inclusion criteria (e.g. students at-risk of emotional behavioral disorder), or when only one disability was present. Studies with multiple disabilities included without a specified focus should be coded as "No primary"

Teacher Language Sample- Teacher Participants

Question/Area of Information	Response options	Notes
Whose language is being measured?	1 general education teacher 2 special education teacher 3 paraprofessional/ paraeducator/aide 0 Other	
How many teachers' language practices were measured that met inclusion criteria?		
Were there additional teachers in the study sample outside of those in the teacher language sample?	1 yes 2 no	
Teacher Gender (included teacher sample only)	1 Male 2 Female 3 Not reported (N/R)	
Teacher Race/Ethnicity (included teacher sample only)	1 White/Caucasian 2 Black or African American 3 Hispanic/Latinx 4 Native Hawaiian or Asian/Pacific Islander 5 American Indian or Alaskan Native 6 Asian 7 European 8 Multiracial 9 Not reported (N/R)	

Other Teacher Demographics (included teacher sample only)	Avg. Age	
	Avg. number of years teaching	
Quality: Do authors report sufficient demographic information about the teachers?	0 No 2 Yes	No- does not provide at least the type of profession, sex and race/ethnicity of the teachers included Yes- Provides information about the type of professional, the sex, and race/ethnicity of included teachers

Teacher Language Measurement

Question/Area of Information	Response options	Notes
Instructional content during language measurement	1 ELA 2 Reading 3 Writing 4 Math 5 Science 6 Social Studies 7 PE 0 Other	Select as many as are named in the study description for when observation of teacher language was occurring.
Duration of teacher observations	Fill in the # of sessions/observations # of minutes per sessions Span of time for all observations	If there are multiple teachers and they each had a different number of sessions or number of minutes measured, take the average. Span of time referees to the length of time during which these observations took place. For example, was it 5 observations of 30 minutes each over the span of a week or the span of 3 months?
Method for Coding Language	1 Live observation and coding 2 Coding from video recording 3 Coding from audio recording 4 Coded from human transcription of audio/video 5 Coded from automated transcription of audio/video 6 Coded from transcripts (unknown method of transcription) 0 Other	Recording the observations means using video or audio equipment to have a reviewable material. This is different than a reference to recording the behaviors by counting them. That refers to the act of tallying or making note of a behavior.
Behavior Sampling Method 1	1 Continuous 2 Intermittent	1 Continuous means that coding for behaviors happens during the full observation

		2 Intermittent means that the coding happens in parts of the observation session (e.g. 10 seconds of observing followed by 10 seconds of not)
Behavioral Sampling Method 2	1 Event Sampling (Frequency) 2 Timed Event (Duration) 3 Interval	Event Sampling is defined by counting the number of times a particular behavior occurs. This would be like a tally system. Timed Event is defined as measuring the amount of time a behavior occurs in addition to how many times. This would be determining when a behavior started and when it ended each time it occurred. Interval is defined as breaking the full observation time into smaller sections of time or intervals and tracking if the behavior occurs during each interval. It may be a specific type of interval such as partial interval.
Language measurement system	1 researcher developed coding system 2 existing coding system (e.g. Brophy-Good Dyadic Interaction) 3 adapted from existing coding system 0 Other	researcher developed coding system- Researchers decided what they would be measuring and how they would define and operationalize those behaviors. If nothing is reported, it can be assumed that the researchers developed their own coding system Existing coding system- used a system that had been developed and/or published by others and could be referenced by system or author name Adapted- took an existing coding system and made some changes to reflect the author's specific study but did not change enough of it to make it their own coding system
Language measurement system name:		
Quality: Do authors adequately describe measurement system used?	0 no 2 yes	Yes- authors give information to tell how, when, how long and who in relation to the observational measurement system
Quality: Do authors describe role and training of observers/coders?	0 no 1 partial 2 yes	No- do not tell any information about observers or how they were trained Partial- Describes observers or training Yes- Describes who the observers were and how they were trained

Labels, Definitions and Amount for Labeled Teacher Language		Include metric of measurement (min, hr, %, etc)
Teacher language measured when talking with whom	1 whole group 2 target students (pre-determined) 3 individual students (not pre-determined) 0 Other	
Were there other teacher behaviors measured and coded that were not verbal or not only verbal (lumped in gesture with verbal language)	1 yes 2 no	
What types of language were measured?	1. Vocabulary 2. Dialogic teaching 3. Explicit instruction 4. Feedback academic 5. Feedback- behavioral 6. Questions/questioning 7. Instructional 8. logistical/functional 9. metacognitive 10. Teacher talk	1. Vocabulary= Words taught, learned or used that require understanding of the meaning of the word and its use (ex: Semantics, domain-specific vocabulary) 2. Dialogic teaching= Instruction that focuses on back and forth dialogue with students (ex: Discussion, conversational turns, initiation-response-feedback (IRF), discourse moves, talk moves) 3. Explicit instruction= Clear, structured, systematic, scaffolded teaching practices(ex: Prompts, scaffolds, modeling) 4. Feedback academic= Information provided about academic performance to understand an outcome and/or improve future work (ex: error correction) 5. Feedback- behavioral= Information provided about behavioral performance to understand an outcome and/or improve future behavior (ex: Praise, Reprimands) 6. Questions/questioning= Language used to find out information or get a response (Ex: Open-ended questions, closed questions, high or low level questions, opportunities to respond) 7. Instructional= language used for providing information related to classroom content

		8. logistical/functional= language used to organize, direct or otherwise make the classroom work but is not about content 9. metacognitive= language that identifies, supports or directs awareness or regulation of one's learning, behavior or thinking. 10. Teacher talk= General term to label teacher language
Quality: Do authors adequately define teacher language practices they are measuring?	0 no 1 partial 2 yes	No- teacher language practices are not described or defined Partial- teacher language practices are described but lack sufficient detail in the definitions or examples to allow a naïve reader to determine the presence or absence of behavior Yes- teacher language practices are described clearly, with definitions and examples of the teacher language of interest that would allow a naïve reader to determine the presence or absence of behavior
Quality: Do authors collect reliability data?	0 no 2 yes	Yes: Authors collect reliability data (generally referred to as inter observer agreement data). No: Authors do not collect data OR data collection is unclear or unreported.
Quality: Is the reliability data sufficient in terms of number or % of sessions and level of agreement	0 no 1 partial 2 yes	Sufficient is 25 % of sessions with 90% or higher agreement rate No- not sufficient in either area Partial- sufficient in one area but not the other Yes- sufficient in both areas
Was the teacher language part of a baseline of an intervention?	1 yes 2 no	
If yes, who received the intervention	1 teachers 2 students 3 N/A	If no intervention, select N/A

What was the focus of the intervention?		
Were student outcomes related to teacher language measured?	1 yes 2 no 3 NA	
If yes, what type of student outcome was is?	1 engagement 2 challenging/disruptive behavior 3 other emotional-behavioral 4 reading 5 math 6 oral language 7 other academic 8 N/A
